# IMPAX SK

## Technologies

# SKAutomaster
## Automatic timing windows

The first truly
"operation-free"
process monitor.

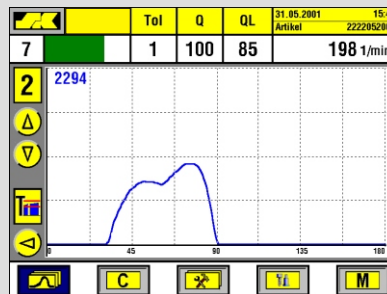

## Your advantages:

- always perfect settings for all
  of your process monitors

- always the same level of
  monitoring performance

- automatically reduces the
  number of nuissance stoppages

- maximizes performance even
  with untrained personnel

- prevents future adjustment
  errors.

- available for our models
  SK 2, SK 4, SK 5, SK 7, SKbbx
  SK 100

The SKAutomaster-software automatically adjusts your process
monitoring system to work perfectly with the different products
you run. It insures that your monitor will:
- set the right timing window
- determine and then set the envelope profile that will
  best match the currently running process
- use a completely new routine to calculate force envelopes

When used in conjunction with our SKFuzzymaster software,
monitoring consistency and error detection will perform
at a much higher level, independant of how well your monitoring
systems are operated and adjusted by the operator.

Without SKAutomaster:
poor setting of the timing window
causes a loss of valuable
monitoring performance.

With SKAutomaster:
the timing window automatically
zooms in to capture and analyze only
the critical forming
signature that
pertains to the
specific process.
Monitoring power
is concentrated
on the process,
and is not wasted
evaluating machine
noise or other
conditions not
related to the actual
forming process.
