

The new dimension in process monitoring:  
Profile Enveloping.

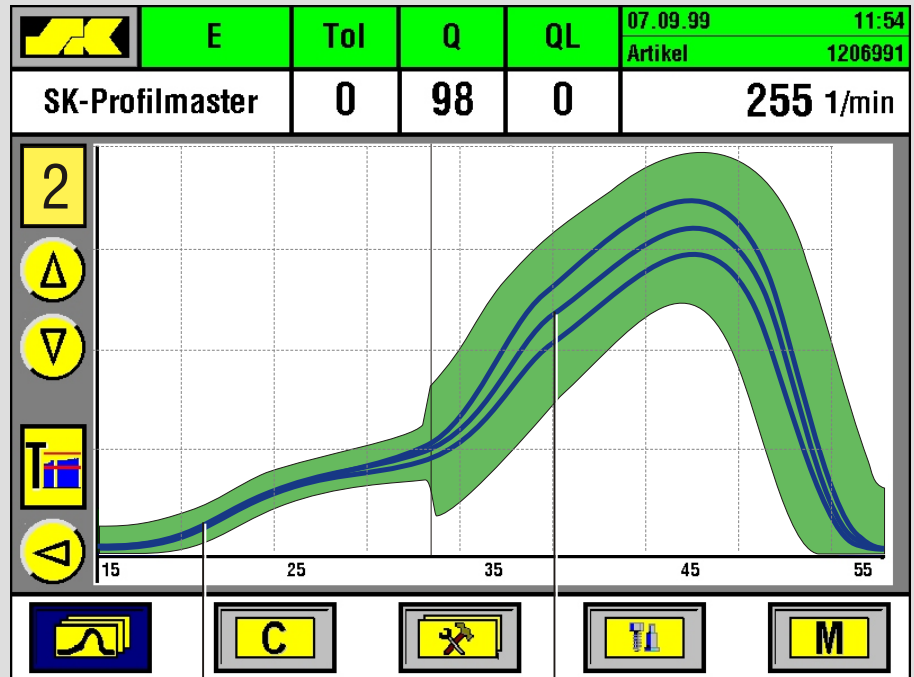

Profiled envelopes allow you to match the monitoring sensitivity to the demands of the process: tight limits in those areas of the force curve where higher sensitivity is required, and lower sensitivity where the process tends to be more erratic.

Your advantages:

- dramatically improves the monitoring quality
- reduces nuisance shutdowns
- extends production runs during unattended shifts
- very easy to use
- available in our models IMPAX/SK 2 IMPAX/SK 4, IMPAX/SK 7, and IMPAX/SK 100
- available as an upgrade

Establishes the optimum Envelope Profile

Envelope Profile with high sensitivity (tighter limits are required)

Wider Envelope Profiles where the process is more variable.

SKProfilemaster for reliable error detection
