

### Improved fault detection and reduced down time with SKQmaster

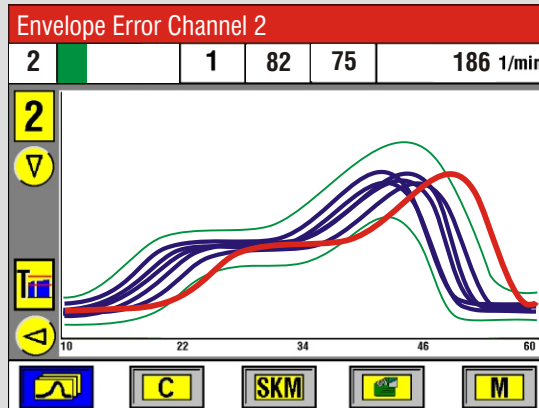

#### Your advantages:

- improves signal quality on poorly running machines
- reduces nuisance shutdowns
- improves up time
- improves sensitivity
- fully automatic operation
- available for our models IMPAX/SK 2, IMPAX/SK 4, IMPAX/SK 7, and IMPAX/SK 100
- available as an upgrade to select systems

#### without SKQmaster

Problem:  
force curves shift due to RPM-variation/poor machine condition:

- envelopes will be set too far apart
- poor error detection
- the machine will still stop often for no apparent reason
- productivity is low

#### with SKQmaster

#### Solution:

- machine (signal) variation is automatically compensated for
- the force curves are now very uniform and reproducible
- the envelopes can be set to optimize sensitivity
- error detection improves
- significantly reduces nuisance shut-downs
- increases productivity
